1. Chinese Patent Application No. 1282767 published February 7, 2001 discloses:

This ink composition is obtained by dissolving salicylic acid or acetylsalicylic acid in a mixed solvent composed of a polyethylene glycol and/or an ethylene glycol monoether liquid at a normal temperature and a solvent selected from a monohydric alcohol, a ketone, an ester and a halogenated hydrocarbon. The ink composition may contain a colorant substance except white dissolved in the mixed solvent. The objective method for preparing a draft comprises applying an ink to a design on a design paper and permeating the ink, placing the design paper on a material to be transferred, and tracing the design by a thrusting tool so as to transfer the ink from the design paper to the surface of the material to be transferred under pressure.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "E. R. Witt", written over a horizontal line.
